EDUCATION

Princeton University   **Princeton, NJ**
Ph.D. in Computer Science, June 1991; M.A. in Computer Science, February 1988. Awarded IBM Graduate Fellowship for academic years 1988-89, 1989-90; GTE Fellowship for Academic year 1987-88; NCR Fellowship for academic year 1986-87.

Massachusetts Institute of Technology   **Cambridge, MA**
M.S. and B.S. in Computer Science and Engineering, September 1986.

RESEARCH INTERESTS

Data privacy, particularly with respect to analysis of private data. This includes privacy-preserving data mining, data de-identification and anonymization, and limits on identifying individuals from data mining models. Data mining, including fairness issues in data mining, data mining of text and data mining techniques applied to interoperation of heterogeneous information sources. Fundamental data mining challenges posed by these applications include extracting knowledge from noisy data, identifying knowledge in highly skewed data (few examples of "interesting" behavior), and limits on learning. Database support for widely distributed and autonomously controlled information, particularly issues related to data privacy.

SOFTWARE DEVELOPED

GeoNODE (Geographic News On Demand Environment), developed while at the MITRE Corporation, combines research results from natural language, data mining, multimedia, and visualization into a system for analyzing news. News, in the context of GeoNODE, is anything from television broadcasts to focused email and newsgroups. GeoNODE was used as a concept evaluation prototype at several sites within the Department of Defense. Responsible for database development, as well as the text mining research component. See publications for more details.
