| Preface . . . . .  | 15        |
| Acknowledgements . . . . .                                     | 22        |
| <b>Part I: Preliminaries</b>                                   | <b>24</b> |
| 1. Basics of Software Testing                                  | 25        |
| 1.1. Humans, errors, and testing . . . . .                     | 25        |
| 1.1.1. Errors, faults, and failures . . . . .                  | 27        |
| 1.1.2. Test automation . . . . .                               | 28        |
| 1.1.3. Developer and tester as two roles . . . . .             | 28        |
| 1.2. Software quality . . . . .                                | 29        |
| 1.2.1. Quality attributes . . . . .                            | 29        |
| 1.2.2. Reliability . . . . .                                   | 30        |
| 1.3. Requirements, behavior, and correctness . . . . .         | 31        |
| 1.3.1. Input domain and program correctness . . . . .          | 32        |
| 1.3.2. Valid and invalid inputs . . . . .                      | 33        |
| 1.4. Correctness versus reliability . . . . .                  | 34        |
| 1.4.1. Correctness . . . . .                                   | 34        |
| 1.4.2. Reliability . . . . .                                   | 35        |
| 1.4.3. Program use and the operational profile . . . . .       | 35        |
| 1.5. Testing and debugging . . . . .                           | 36        |
| 1.5.1. Preparing a test plan . . . . .                         | 36        |
| 1.5.2. Constructing test data . . . . .                        | 36        |
| 1.5.3. Executing the program . . . . .                         | 39        |
| 1.5.4. Specifying program behavior . . . . .                   | 40        |
| 1.5.5. Assessing the correctness of program behavior . . . . . | 42        |
| 1.5.6. Construction of oracles . . . . .                       | 44        |
| 1.6. Test metrics . . . . .                                    | 45        |
| 1.6.1. Organizational metrics . . . . .                        | 45        |
| 1.6.2. Project metrics . . . . .                               | 46        |
| 1.6.3. Process metrics . . . . .                               | 46        |

|         |   |    |
|---------|---|----|
| 1.6.4.  | Product metrics: generic . . . . .                            | 47 |
| 1.6.5.  | Product metrics: OO software . . . . .                        | 47 |
| 1.6.6.  | Progress monitoring and trends . . . . .                      | 49 |
| 1.6.7.  | Static and dynamic metrics . . . . .                          | 49 |
| 1.6.8.  | Testability . . . . .   | 49 |
| 1.7.    | Software and hardware testing . . . . .                       | 50 |
| 1.8.    | Testing and verification . . . . .                            | 52 |
| 1.9.    | Defect management . . . . .                                   | 53 |
| 1.10.   | Execution History . . . . .                                   | 54 |
| 1.11.   | Test generation strategies . . . . .                          | 54 |
| 1.12.   | Static testing . . . . .                                      | 56 |
| 1.12.1. | Walkthroughs . . . . .  | 57 |
| 1.12.2. | Inspections . . . . .   | 57 |
| 1.12.3. | Use of static code analysis tools in static testing . . . . . | 58 |
| 1.12.4. | Software Complexity and static testing . . . . .              | 59 |
| 1.13.   | Model-based testing and model checking . . . . .              | 59 |
| 1.14.   | Control Flow Graph . . . . .                                  | 60 |
| 1.14.1. | Basic block . . . . .   | 61 |
| 1.14.2. | Flow graph: definition and pictorial representation . . . . . | 62 |
| 1.14.3. | Path . . . . .  | 63 |
| 1.15.   | Dominators and post-dominators . . . . .                      | 67 |
| 1.16.   | Program Dependence Graph . . . . .                            | 69 |
| 1.16.1. | Data dependence . . . . .                                     | 69 |
| 1.16.2. | Control dependence . . . . .                                  | 70 |
| 1.17.   | Strings, languages, and regular expressions . . . . .         | 72 |
| 1.18.   | Types of testing . . . . .                                    | 73 |
| 1.18.1. | Classifier: C1: Source of test generation . . . . .           | 74 |
| 1.18.2. | Classifier: C2: Life cycle phase . . . . .                    | 76 |
| 1.18.3. | Classifier: C3: Goal directed testing . . . . .               | 77 |
| 1.18.4. | Classifier: C4: Artifact under test . . . . .                 | 79 |
| 1.18.5. | Classifier: C5: Test process models . . . . .                 | 80 |
| 1.19.   | The saturation effect . . . . .                               | 84 |
| 1.20.   | Summary . . . . .   | 87 |
|         | Bibliographic Notes . . . . .                                 | 88 |
|         | Exercises . . . . .   | 93 |

|   |            |
|---|------------|
| <b>2. Test Generation: From Requirements</b>                          | <b>98</b>  |
| 2.1. Introduction . . . . .   | 98         |
| 2.2. The test selection problem . . . . .                             | 100        |
| 2.3. Equivalence partitioning . . . . .                               | 101        |
| 2.3.1. Faults targeted . . . . .                                      | 102        |
| 2.3.2. Relations and equivalence partitioning . . . . .               | 103        |
| 2.3.3. Equivalence classes for variables . . . . .                    | 107        |
| 2.3.4. Uni-dimensional versus multidimensional partitioning . . . . . | 110        |
| 2.3.5. A systematic procedure for equivalence partitioning . . . . .  | 112        |
| 2.3.6. Test selection based on equivalence classes . . . . .          | 116        |
| 2.3.7. GUI design and equivalence classes . . . . .                   | 119        |
| 2.4. Boundary value analysis . . . . .                                | 120        |
| 2.5. Category-partition method . . . . .                              | 126        |
| 2.6. Cause-effect graphing . . . . .                                  | 132        |
| 2.6.1. Notation used in Cause-effect graphing . . . . .               | 133        |
| 2.6.2. Creating cause-effect graphs . . . . .                         | 135        |
| 2.6.3. Decision table from cause-effect graph . . . . .               | 139        |
| 2.6.4. Heuristics to avoid combinatorial explosion . . . . .          | 143        |
| 2.6.5. Test generation from a decision table . . . . .                | 146        |
| 2.7. Test generation from predicates . . . . .                        | 146        |
| 2.7.1. Predicates and Boolean expressions . . . . .                   | 147        |
| 2.7.2. Fault model for predicate testing . . . . .                    | 148        |
| 2.7.3. Predicate constraints . . . . .                                | 150        |
| 2.7.4. Predicate testing criteria . . . . .                           | 152        |
| 2.7.5. Generating BOR, BRO, and BRE adequate tests . . . . .          | 153        |
| 2.7.6. Cause effect graphs and predicate testing . . . . .            | 166        |
| 2.7.7. Fault propagation . . . . .                                    | 166        |
| 2.7.8. Predicate testing in practice . . . . .                        | 168        |
| 2.8. Summary . . . . .  | 171        |
| Bibliographic Notes . . . . .   | 171        |
| Exercises . . . . .   | 174        |
| <b>3. Test Generation: FSM Models</b>                                 | <b>181</b> |
| 3.1. Software design and testing . . . . .                            | 181        |
| 3.2. Finite state machines . . . . .                                  | 183        |
| 3.2.1. Excitation using an input sequence . . . . .                   | 186        |
| 3.2.2. Tabular representation . . . . .                               | 187        |
| 3.2.3. Properties of FSM . . . . .                                    | 188        |
| 3.3. Conformance testing . . . . .                                    | 189        |
| 3.3.1. Reset inputs . . . . .   | 191        |
| 3.3.2. The testing problem . . . . .                                  | 193        |

|           |   |            |
|-----------|---|------------|
| 3.4.      | A fault model . . . . .   | 193        |
| 3.4.1.    | Mutants of FSMs . . . . .   | 195        |
| 3.4.2.    | Fault coverage . . . . .  | 197        |
| 3.5.      | Characterization set . . . . .                                    | 198        |
| 3.5.1.    | Construction of the $k$ -equivalence partitions . . . . .         | 198        |
| 3.5.2.    | Deriving the characterization set . . . . .                       | 202        |
| 3.5.3.    | Identification sets . . . . .                                     | 203        |
| 3.6.      | The W-method . . . . .  | 204        |
| 3.6.1.    | Assumptions . . . . .   | 205        |
| 3.6.2.    | Maximum number of states . . . . .                                | 205        |
| 3.6.3.    | Computation of the transition cover set . . . . .                 | 205        |
| 3.6.4.    | Constructing $Z$ . . . . .  | 207        |
| 3.6.5.    | Deriving a test set . . . . .                                     | 207        |
| 3.6.6.    | Testing using the W-method . . . . .                              | 208        |
| 3.6.7.    | The error detection process . . . . .                             | 210        |
| 3.7.      | The partial W-method . . . . .                                    | 211        |
| 3.7.1.    | Testing using the $W_p$ -method for $m = n$ . . . . .             | 212        |
| 3.7.2.    | Testing using the $W_p$ -method for $m > n$ . . . . .             | 215        |
| 3.8.      | The UIO-sequence method . . . . .                                 | 217        |
| 3.8.1.    | Assumptions . . . . .   | 217        |
| 3.8.2.    | UIO sequences . . . . .   | 217        |
| 3.8.3.    | Core and non-core behavior . . . . .                              | 219        |
| 3.8.4.    | Generation of UIO sequences . . . . .                             | 221        |
| 3.8.5.    | Distinguishing signatures . . . . .                               | 231        |
| 3.8.6.    | Test generation . . . . .   | 232        |
| 3.8.7.    | Test optimization . . . . .                                       | 234        |
| 3.8.8.    | Fault detection . . . . .   | 235        |
| 3.9.      | Automata theoretic versus control-flow based techniques . . . . . | 237        |
| 3.9.1.    | $n$ -switch-cover . . . . .                                       | 240        |
| 3.9.2.    | Comparing automata theoretic methods . . . . .                    | 241        |
| 3.10.     | Summary . . . . .   | 242        |
|           | Bibliographic Notes . . . . .                                     | 243        |
|           | Exercises . . . . .   | 246        |
| <b>4.</b> | <b>Test Generation: Statecharts</b>                               | <b>251</b> |
| 4.1.      | Statecharts . . . . .   | 251        |
| 4.1.1.    | States . . . . .  | 252        |
| 4.1.2.    | Transitions . . . . .   | 253        |
| 4.1.3.    | Pseudo states . . . . .   | 254        |
| 4.1.4.    | Events . . . . .  | 258        |
| 4.1.5.    | Actions . . . . .   | 260        |

|           |  |            |
|-----------|--|------------|
| 4.1.6.    | Statechart and behavior . . . . .                                | 260        |
| 4.1.7.    | Compound transitions . . . . .                                   | 264        |
| 4.1.8.    | Scope of states and transitions . . . . .                        | 265        |
| 4.2.      | Test generation from Statecharts . . . . .                       | 266        |
| 4.3.      | Statecharts as I/O transformers . . . . .                        | 268        |
| 4.4.      | Distinguishing pairs of states . . . . .                         | 269        |
| 4.5.      | Statecharts with no compound states . . . . .                    | 270        |
| 4.6.      | Test harness and internal events . . . . .                       | 272        |
| 4.7.      | Handling partial labels . . . . .                                | 274        |
| 4.8.      | Discarding and pruning tests . . . . .                           | 276        |
| 4.9.      | Handling connectors . . . . .                                    | 280        |
| 4.10.     | Handling guards . . . . .  | 283        |
| 4.10.1.   | Constructing $P$ and $W$ . . . . .                               | 284        |
| 4.10.2.   | Generation of variable-value pairs . . . . .                     | 286        |
