

**Purdue University  
Computer Science Department  
CS44800 Homework 5 (Feedback)  
Fall 2019**

As usual, **we encourage you to answer the questions using your own words and not just copy text from the Textbook or Online sites.**

Most common errors were:

**Question 1.**

- We were planning to release some sample solutions of the problems, but unfortunately some students had not submitted yet. If you have any question about the problems, please use office hours and/or PSO.
- Some useful notes are here: <https://piazza.com/class/jyw0kgmjx1d3a1?cid=397>
- Since there was some confusion with (c), we did not deduct any points for wrong answers for any of the three schedules.

**Question 2.**

- (c) The reason why checkpoints are useful was not clear. Answers such as: “checkpoints are important because are useful/crucial/important/relevant to the recovery process” are too vague or trivial.
