

CS44800 Project 5 (Feedback)

Big Data Management Using Hadoop/Spark

Fall 2019

Grading

The total number of points for this project is 5 points, the breakdown is as follows:

- 2.5 points for passing automated testcases.
 - We have four testcases. Student must pass any two testcases for getting full points. Each test case was assigned an equal weight.

Coding Feedback (Common Observations)

It was nice to see that most of you had done a perfectly fine job on the coding passed the grading testcases successfully. Here are some of the minor coding mistakes that we observed but they did not penalize your scores:

- Modifying or adding instance variable in files apart from **Project5.java**. You should have seen that we only expected you to submit the **Project5.java** file and we used the rest of the code as-is from the skeleton
- We also observed that most of the students who did not pass the all testcases, did some error on query implementation and writing wrong output format.
