

I will go over chapter 7 and then start chapter 14 on functional dependencies and normalization.

We will not cover 9-12 at this time since they are extension of fundamental ideas we have covered so far.

Your midterm will cover Chapters 1, 2, 3, 5, 6, 7 and 14.

All questions will be based on what was covered for each chapter in class.

I will show you the format of examination so you can prepare.

Read all bold terms in each chapter and go over some of the review questions.

Some questions from home work or project may be included.
