

I have discussed material covered, types of questions etc in class.  
I have shown some old exams in class (not to be distributed)

I am in office around 11am and you may come by to learn more.

The exam has a question 1 (many parts) from first few chapters worth about 12 points. They are straight forward to answer.

Question 2 ( many parts) is worth 9 points and it deal with normalization and dependency theory. This is what I have covered over last few classes.

Question 3 , 4, and 5 deal with relational algebra, SQL, optimization, inner and outer joins ( all worth 4 points).

So you can now review these topics, slides and chapters in book.

All questions in exam have been covered and discussed in class.

More on Tuesday in Class.
