CS 307: Final Presentation

Project Name

Student One

Student Two

Student Three

Student Four

Purdue University, Date

Overview

- Motivation

- Product Features

- Design

- Results

- Challenges

- Future Work

- Plan for Demo

You have 10-15 minutes for the slides, so you should have no more than 15 slides of content (don't count first page)

Motivation

- One slide to describe the context
  - Which problems does this solve?
    - Why is the project needed or useful?

Product Features

- What does it do?

  - Describe how it helps solve the problems you mentioned earlier

  - Don't describe how it works (that's the next section)

  - This is about the requirements your product meets

    - Focus on the ones that matter

Design

- Show your design
  - A component diagram works well here
  - How does it work
    - What's interesting about your solution?
    - How new, better and clever is it?
    - Did you make an experiment, guess or interesting gamble in the design?

Results

- Does it work?
  - All the time?
- How fast and robust is it?

Challenges

- What was interesting or challenging about this project?

- What did you learn?

- What could the rest of the class learn from your experience?

Future Work

- What is left to do?
  - Which requirements were not met?
- How could it be made better?
  - Additional features
  - Different design, technologies

Plan for Demo

- Describe the steps you will follow in your demo

You have 10-15 minutes for the demo

Fin

- Any questions?
- Demo time!

Backup Plan

- In these slides, include screenshots and anything else you'd want to show if your demo doesn't work

    - Don't show the slides if your demo works well
