CS354 SYLLABUS
Fall, 2021

Professor
Dr. Douglas Comer  LWSN 1171  comer@cs.purdue.edu

Teaching Assistants  cs354-ta@cs.purdue.edu
Trevor N. Hill  Rashidedin Jahandideh  Hyunchai Jeong
MyeongSu Kim  David P. Rowe  Kasra Sadeghi
Xilun Wu

When you have questions, start by asking the TAs; their office hours will be announced soon. Note: if you send to the TA mailing list, all of them will receive the email.

Evening Exam and Class Off
There will be an evening midterm at 8 P.M. on October 13th in LILY 1105. To make up for the exam, we will not have class Friday, October 8th.

Class email list (sending to the list will reveal your identity)

Purpose
This is a comprehensive, upper-division course on the design of computer operating systems. It covers scientific principles, major components of an operating system, and mechanisms used. The course focuses on general-purpose operating systems for modern processor architectures. You will understand the major components in an operating system, how to organize the components into a structured hierarchy, abstractions that form the basis for design, and invariants that a designer follows. You will gain first-hand experience modifying operating system components and writing code inside an operating system.

Textbook

Grading Policy
35%  Lab assignments
10%  Written homework assignments
50%  Exams (midterm and final)
5%  In-class quizzes

Late Policy
There is no partial credit for late assignments; you must submit by the deadline. However, each student is granted three grace days (24-hour periods) that can be used for any lab assignment except for the final project. The three days can be applied to a single assignment or one day can be applied to each of three assignments. For more details, see the class web page.
Tentative Schedule Of Topics

1. Course overview; introduction to operating systems
2. Quick review of computer architecture; Process management: process scheduling and context switching
3. Process management: process suspension and resumption; message passing
4. Process management: process coordination and synchronization
5. Low-level memory management: address spaces, stack and heap segments
6. High-level memory management: partitioning and virtual memory; demand paging
7. High-level synchronous message passing
8. Device management: exceptions, interrupts, and device drivers
9. Device management: device-independent I/O and an example device driver
10. Networking and protocol implementation; network processes
11. Remote disk and remote file access mechanisms
12. File systems
13. File names and a syntactic namespace
14. User interface (shell)
15. Operating system configuration and initialization

Note: the selection of topics and the order may change to accommodate lab assignments (we have not yet finalized the set of lab assignments).

Attendance

Students are expected to be present for every meeting of the classes in which they are enrolled. Only the instructor can excuse a student from a course requirement or responsibility. When conflicts or absences can be anticipated, such as for many University sponsored activities and religious observations, the student should inform the instructor of the situation as far in advance as possible and plan to make up for missed work.

Changes For Emergencies

In the event of a major campus emergency, course requirements, deadlines and grading percentages are subject to change that may be necessitated by a revised semester calendar or other circumstances. If an emergency occurs, you can consult the CS web page for details.

Students with Disabilities

Purdue University is required to respond to the needs of students with disabilities as outlined in both the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 through the provision of auxiliary aids and services that allow a student with a disability to access and participate fully in the programs, services, and activities at Purdue University. If you have a disability that requires special academic accommodation, please make an appointment to speak with the instructor within the first three (3) weeks of the semester in order to discuss any adjustments. It is the student’s responsibility to notify the Disability Resource Center (http://www.purdue.edu/drc) of an impairment/condition that may require accommodations and/or classroom modifications. We cannot arrange special accommodations without confirmation from the Disability Resource Center.

Academic Integrity

You are expected to read and follow Purdue’s guide to academic integrity: http://www.purdue.edu/purdue/about/integrity_statement.html

Behavior consistent with cheating, copying, and academic dishonesty is not tolerated. Depending on the severity, such behavior may result in a zero score on an assignment or exam, a failing grade for the class, or even expulsion. Purdue prohibits dishonesty in connection with any University activity. Cheating, plagiarism, or knowingly furnishing false information to the University are examples of dishonesty. (Part 5, Section III-B-2- a, University Regulations). Furthermore, the University Senate has stipulated that the commitment of acts of cheating, lying, and deceit in any of their diverse forms (such as the use of substitutes or taking examinations, the use of illegal cribs, plagiarism, and copying during examinations) is dishonest and must not be tolerated. Moreover, knowingly to aid and abet, directly or indirectly, other parties in committing dishonest acts is in itself dishonest. (University Senate Document 7218, December 15, 1972).

The course policy is that students who are found guilty of dishonesty will receive a zero for the work in question and the Dean of Students will be notified for possible further action.
