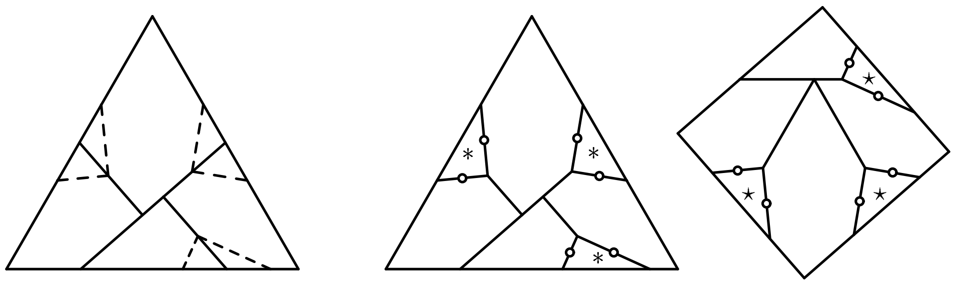
Corrections to
"Geometric Dissections Now Swing and Twist"

Greg N. Frederickson

There is an unfortunate mistake in [1]. Although Figure 20 on page 15 shows a correct twist-hinged dissection of an equilateral triangle to a square, it does not show the specific twist-hinged dissection that relates directly to Figs. 1 and 21. In particular, the Figure 20 in the article converts a different swing-hinging of an equilateral triangle to square than the one in Figure 1. A corrected Figure 20 is given below. Figure 21 is consistent with this corrected Figure 20.



20. Swiping isosceles, for a twist-hingeable triangle to square (corrected)
