

## Homework 6

1. **RSA Assumption (5+12+5)**. Consider RSA encryption scheme with parameters  $N = 21 = 3 \times 7$ .

(a) Find  $\varphi(N)$  and  $\mathbb{Z}_N^*$ .

**Solution:**

- (b) Use repeated squaring and complete the rows  $X, X^2, X^4$  for all  $X \in \mathbb{Z}_N^*$  as you have seen in the class (slides), that is, fill in the following table by adding as many columns as needed.

**Solution.**

$X$	1	2	4	5	8	10	11	13	16	17	19	20
$X^2$												
$X^4$												

- (c) Find the row  $X^5$  and show that  $X^5$  is a bijection from  $\mathbb{Z}_N^*$  to  $\mathbb{Z}_N^*$ .

**Solution.**

$X$	1	2	4	5	8	10	11	13	16	17	19	20
$X^5$												

2. Answer to the following questions (7+7+7+7):

- (a) Compute the three least significant (decimal) digits of  $1337011^{2046002}$  by hand.  
**Solution.**

(b) Is the following RSA signature scheme valid?(Justify your answer)

$$(r||m) = 33333, \sigma = 66666, N = 87155, e = 65537$$

Here,  $m$  denotes the message, and  $r$  denotes the randomness used to sign  $m$  and  $\sigma$  denotes the signature. Moreover,  $(r||m)$  denotes the concatenation of  $r$  and  $m$ . The signature algorithm  $Sign(m)$  returns  $(r||m)^d \pmod N$  where  $d$  is the inverse of  $e$  modulo  $\varphi(N)$ . The verification algorithm  $Ver(m, \sigma)$  returns  $((r||m) == \sigma^e \pmod N)$ .

(Hint: Note that 5 is a factor of  $N = 87155$ .)

**Solution.**

- (c) Remember that in RSA encryption and signature schemes,  $N = p \times q$  where  $p$  and  $q$  are two large primes. Show that in a RSA scheme (with public parameters  $N$  and  $e$ ), if you know  $N$  and  $\varphi(N)$ , then you can find the factorization of  $N$  i.e. you can find  $p$  and  $q$ .

**Solution.**

- (d) Consider an encryption scheme where  $Enc(m) := m^e \pmod N$  where  $e$  is a positive integer relatively prime to  $\varphi(N)$  and  $Dec(c) := c^d \pmod N$  where  $d$  is the inverse of  $e$  modulo  $\varphi(N)$ . Show that in this encryption scheme, if you know the encryption of  $m_1$  and the encryption of  $m_2$ , then you can find the encryption of  $(m_1 \times m_2)^3$ .

**Solution.**

**Collaborators :**
