Lecture 00: Introduction
What to Expect from this Course?

- We shall learn the fundamentals of cryptography
  - Topics: Private-key Cryptography, Pseudorandomness, MACs, (possibly) Hashing, Public-key Cryptography, Digital Signatures, (possibly, basics of) Multi-party Computation
- Coding is encouraged to develop intuition
  - You can use sage (similar to Python) for coding. You can use the free platform cocalc to write and compile sage code
- In regular semesters, lectures are highly interactive. This semester, there will be lecture videos, and two lectures per week for interaction
  1. Video lectures for the entire week will go online on Sunday midnight
  2. In-person lectures will be recorded and put online
Who am I?

- Name: Hemanta K. Maji
- Research Interests: Cryptography, Theoretical Computer Science
- Office: LWSN 1177
- Office Hours: By email
We shall use Campuswire for this course to ask and answer questions (joining code is available on Brightspace). Everyone is highly encouraged to use this platform.

Historically, my average response time has been roughly 15 mins.
Evaluation: (Roughly) Seven/eight homework (40%), one mid-term exam (25%), and a final exam (35%). This semester the mid-term and the final will be online.

Grading will be done using percentiles.

- In Fall 2017, Fall 2018, Spring 2020, and Fall 2020: the following grades were given: A+, A, A-, B+, B, B-, C, C-, and F.
- Roughly 23% of students for A or higher, and
- Roughly 23% of students got C or below
- Solving extra-credit problems earns you instructors’ goodwill. So, if your total score is close to a grade threshold, then you might get the higher grade if you have sufficient “instructors’ goodwill”
- In each course offering, a couple of students get an F
Homework Submission: All homework must be \LaTeX-ed
- We shall provide the \LaTeX-files for the questions
- You can use Overleaf to typeset your solutions
- How to submit pdfs for evaluation? TAs will get back to you soon
- We shall use Brightspace
- Students are highly encouraged to collaborate for homework. However, Every student must typeset their own solutions. Furthermore, please mention the name of all the students that you collaborated for each question
Please go over the course policy website for all additional details (this semester there might be some changes, I will update you when I introduce changes)
Instruction in the Course

- Lecture Notes prepared by me will be uploaded
- The lectures and the lecture notes will encourage students to work and think on exploratory problems
Introduction to your TAs

- Hai H. Nguyen
- Hamidreza Amini Khorasgani
- Minh Luong Nguyen
- Office Hours will be uploaded soon (poll for day/time in campuswire)
Background Needed

- Basic Mathematics, like, integration, differentiation,
- Asymptotic Notation, and
- Probability Basics.
