CS 536 (Park) **Assignment VII** **Due: Oct. 11 (Fri.), 1996**

PROBLEM 1

(a) Read the remainder of Chapt. 5 from P & D.

(b) Read "The design philosophy of the DARPA internet protocols" by D. Clark. In *Proc. ACM SIGCOMM '88*, pages 106-114, 1988. Give a one-page summary and critique of the paper (i.e., do you agree with the design paradigm?).

PROBLEM 2

Implement the barrier-server example using TCP. Employ five clients to test your application as before. The only difference is that the server is to print the client's IP address and port number just before sending out the go-aheads. The client prints nothing.
