

Title of your project: Final Proposal

Your name

Purdue University

Your email

1. Introduction

Four to five paragraphs (one column) introducing the problem you plan to investigate

2. Background

One page (two columns) of background/related work. This should include descriptions of anywhere from 5 to 10 papers or tools that motivate the problem presented in the introduction.

3. Motivating Example

Four to five paragraphs (one column) Present a detailed example illustrating the problem, and provide an informal overview of the solution.

4. Approach

Two pages (4 columns) detailing your approach. This should include a detailed description of (a) methodology, (b) pseudo-code describing your algorithm or technique, and (c) how the approach addresses the motivating example

Include a figure that illustrates your idea. This could be an architecture or workflow diagram, expected performance curve; the idea of the figure is to illustrate the main elements of the project.

5. Milestones

One page (2 columns) with details on your current implementation and status, open issues, potential risks, etc.
