Dear Colleague:

The Lawrence Livermore National Laboratory’s prestigious Lawrence Fellowship is now in its eighth year. The Fellowship was established to provide outstanding postdocs an opportunity to pursue cutting-edge science and stimulate cross-fertilization of ideas. The successful candidates have freedom to pursue world-class research with ample resources to support their efforts. The Fellows will interact with scientists with a wide range of expertise, and the Laboratory is committed to making their experience at LLNL positive and rewarding.

This three-year Fellowship is awarded only to candidates with exceptional talent, credentials, scientific track records, and potential for significant achievements. Typically, two to four awards are given each year. After their three-year term, the Fellows may consider any career options, including staying at the Laboratory. Fellows will choose original and independent research in one or more aspects of science relevant to the competency at LLNL. Research areas may include all branches:

- Atmospheric Science  
- Biology  
- Chemistry  
- Applied Mathematics  
- Computer Science  
- Energy  
- Engineering  
- Environmental Science  
- Geology  
- Lasers  
- Materials Science  
- Physics

We hope to attract candidates from your university. Enclosed is a poster that can be posted in the appropriate departments within your institution. Please feel free to download the poster image from our website (http://fellowship.llnl.gov), make additional copies, or e-mail it to potential candidates. You may also refer candidates to the website for additional information. Please contact my program administrator, Edie Rock, at edie@llnl.gov if you have any questions. Your assistance in distributing this information is appreciated.

Sincerely,

Laura R. Gilliom Ph.D.
