Tellabs Foundation in its effort to support the Center for Wireless Systems and Applications (CSWA) and promote new, cutting-edge training of the future communications leaders and nurture opportunities in wireless communications technologies is offering for 2004 seven Graduate Research Assistantships to students working on wireless-related topics. These assistantships are first targeted to Master students who plan to do a research thesis on a wireless-related topic. However exceptions could be given to include PhD students.

**Tellabs Foundation and CWSA encourage diversity.**

Selected students are required to enroll in the new (pending approval) ECE Area of Specialization on Wireless Systems and Applications (WSA). Each selected student will typically receive an Assistantship for 7 months starting June 2004 and will be required to work on a research project with a CWSA faculty.

A meeting to describe the new Area of Specialization and to discuss the procedures and the eligibility criteria is planned for April 15, 2004 at 2:30pm in EE118. Everyone is welcome.
